

# AUTO+ SHREDDER UK/EU CONFETTI CUT

## Overview

Do you waste time standing at a shredder everyday? Do you get frustrated having to pull out staples before you shred documents? The Rexel Auto+ shredder is an ultra efficient, automatic feed bulk shredder designed to make high volume shredding simple as minimal human intervention is required. Thanks to the revolutionary Rexel automatic shredding technology, you no longer need to remove staples or paperclips before you shred documents. Simply load up to 500 A4 sheets of paper in one go and leave the Auto+ shredder to get on with the job; it can continuously shred up to 20,000 sheets in one day without waiting for it to cool down saving you valuable time to get on with your job.

The Auto+ is a high security shredder that shreds paper into unreadable confetti sized particles (sized 3 x 20mm) making it ideal for sensitive and confidential data. Featuring a security password function that locks sensitive information into the shredder whilst shredding is taking place to provide additional security (a separate key is provided to unlock the shredder in case the password has been forgotten). This high volume shredder has an extremely large 83 litre capacity bin that holds up to 1000 sheets of shredded paper meaning you have to empty it less often. The Auto+ is a ultra quiet shredder (less than 60DBA) with a state of the art LCD panel that alerts the user when it is ready, door open, bin full, reverse, overload/jam, or needs maintenance such as oil now. The auto reverse and forward jam features boost functionality to clear paper jams.

## Features

- Automatic feed for minimal human intervention
- Casters fitted for easy manoeuvrability
- Confidential (3 x 20mm) for high security
- LCD display (ready, door open, bin full, reverse, overheat, ...)
